Declassification Review by NIMA / DoD

~~TOP SECRET RUFF~~

This report has been prepared in response to CIA requirement C-RR4-81,019, requesting information on surface-to-air missile (SAM) installations identified on photography from KEYHOLE Mission 9062 of December 1963. As of 3 March 1964 (the cutoff date for the study on which this report is based), a total of 30 SAM installations had been identified on this coverage. Twenty-seven of these are SA-2 SAM sites and three are SAM support facilities. No SA-3 SAM sites were identified

on Mission 9062.

All of the installations are located in the USSR with the exception of three SA-2 sites and one SAM support facility in Egypt. All are of standard size, and configurations and types, where determinable, appear normal. Detailed information on each SAM site and support facility is presented in Table 1. Photographs (derived from Mission 9062) of the installations are also provided (Figures 1-30).
